

Recommendations for the Book

The book is relevant especially at a time when innovation has become important in Africa. The title of the book is catchy and the book is most informative particularly for students of public policy. It is one of a few handbooks available in Africa on public policy that can be used by students... Betty Muthoni Gachire [Kenya School of Government]

This book is relevant and the title is excellent. The content is well thought through. Having both industrial and academia experience, I (know that) a major challenge is teaching an industrial/practical course with insufficient demonstration. There is need for collaboration with the industry so that some of the practical classes are taught by practitioners with the requisite credentials. It is vital for universities to acquaint themselves with the current status in the various industries in order to identify the relevant competences required and infuse these in the training curriculum. Dr. Sarah Vugigi [Kabarak University/Mac Pharmaceuticals Ltd]

The book provides an interesting thought-provoking content for policy makers, private sector, funders, development partners and academia, to view research as an entrepreneurship that goes beyond financial investment and gains to social relevance. Dr. Salome Guchu [Kenya National Innovation Agency, KENIA]

As a researcher, professor of agricultural economics and supervisor of postgraduate student thesis research, I find this book an excellent timely text. It presents theory and practice of policy in the African context through topical policy narratives, issues, formulation, analysis and communication. I, therefore, without hesitation, readily recommend this book to teachers, students, researchers, policy makers and other policy end-users such as private sector actors, development practitioners, NGOs and civil society. Prof. Adrian Mukhebi [Professor Emeritus, Jaramogi Oginga Odinga University of Science and Technology, JOOUST]
